Responsible AI Mini-Framework Template

Copy & Paste Into Your Post

1. Purpose & Intended Use

- What business problem is the AI system addressing?
- Who benefits from the output?
- What decision(s) will this support?

2. Core Responsible AI Principles
(Choose 2–3 such as fairness, accountability, transparency, privacy, safety)

- Principle 1:
- Principle 2:
- Principle 3 (optional):

3. Data & Inputs

- What data will the AI use?
- Is the data appropriate, relevant, and unbiased?
- Could any fields or assumptions introduce risk?

4. Prompt Design & Model Behavior Controls

- What prompting methods will you use (zero-shot, few-shot, guardrails, constraints)?
- How will you reduce ambiguity and prevent harmful assumptions?

5. Fairness & Bias Mitigation

- What biases could appear in outputs?
- How will you test for bias?
- What is your mitigation or revision strategy?

6. Privacy & Security Considerations

- Does the task involve sensitive or personal data?
- What measures ensure privacy protection?
- Do you need anonymization or redaction?

7. Oversight Roles & Human Accountability

- Which team(s) will review and validate AI outputs?

- What decisions remain human-led?
- Under what conditions should AI use be paused or escalated?

8. Evaluation & Continuous Improvement

- How will the organization monitor model performance over time?
- What feedback loops or audits will be used?
- How frequently will systems or prompts be reviewed?

9. Risks & Mitigation Strategies

- Identify 1–2 key risks (ethical, operational, legal).
- How will each risk be managed?

10. Final Recommendation

- Should the organization move forward with this AI use case?
- Why or why not?
