

Module 3 Assignment: AI Workflow Analysis

Introduction

In this assignment, you will deconstruct workflows in your personal or professional life to better understand how AI could, should, or should not be implemented. In particular, we will explore the “missing middle” where humans and AI best work together, as opposed to working as a replacement.

Part 1: Workflow Identification

Select a core project or workflow from your personal, professional, or academic life. Break it into 5–7 discrete steps, fully representing the process.

- Not every step needs AI potential.
- Example steps if you were using a fantasy baseball workflow:
 1. Pre-draft analysis: Review projections & historical data to assign player values.
 2. Daily lineup optimization: Evaluate matchups, weather, and ballparks to select starters.
 3. Waiver wire scouting: Monitor free-agent performance for potential additions.
 4. Trade need analysis: Identify team needs or surpluses for trade planning.
 5. Trade evaluator: Estimate trade value to guide decisions.
 6. Trade proposals: Propose trades, negotiate, and maintain value.

Part 2: The Assessment

For each step in your workflow:

1. Determine if AI tools could be used.
2. **Assess at least two specific AI tools per step**, using these criteria for each tool:
 - Technical capability: Does the tool have the necessary features?
 - Accessibility and cost: Free, subscription, or other costs?
 - Data privacy: Are there concerns about sharing data with third-party tools?

Part 3: Reflection

Now that you have reviewed the process and determined if tools could be used, it's time to reflect on *if* they should be used. Reflect on the wisdom of using these tools:

- What specific skills would be replaced by AI? What would be lost if you chose to replace them? Would the loss be outweighed by the gain?
- How does “outsourcing” this work to an AI impact your sense of mastery, hard work, or vocation? Would you feel less competent, or more in control?
- How does your potential AI use serve your community, family, or work? Are any of those in conflict? (e.g., it serves your employer, but not the community)
- Are there any areas that AI cannot currently be used in and, in the future, *shouldn't* be used in?

The Part 3: Reflection should be 750-1000 words, minimum.

Submit one PDF with Parts 1-3 to the “Module 3 Assignment Reflection Submission” Assignment link.

Please document your word count for each section within the PDF.

Summary of Deliverables

1. One PDF submitted to the “Module 3 Assignment Reflection Submission.” It must include:
 - a. The breakdown of discrete parts from Part 1
 - b. Your assessment from Part 2
 - c. Your reflection from Part 3
