

Module 6 Assignment: AI Interaction Audit & Ethical Reflection

Introduction

Artificial Intelligence is all around us, and will be more and more so every day. For one full week this term, you will track your interactions with AI systems. This will include both active use (where you choose to use a tool) and passive use (where a tool is working in the background).

Part 1: Seven-Day AI Log

- **Task:** Track **every** AI interaction for **seven consecutive days**. If there are tasks you do every day, or multiple times a day, you may create a 'Daily' section and put them there rather than log each and every time separately.

Please note, all examples and categories are meant to be helpful, but not limiting. If you have a different way of categorizing them that better describes your usage, great!

- **Privacy note:** You do **not** need to log anything sensitive (medical, financial, etc.). Optional: anonymize tools while still reflecting ethical considerations.
- **Log format:**
 - Date
 - System name (e.g., Netflix recommendation)
 - Type of interaction (Direct, Passive, Professional, etc.)
 - Outcome (time saved, helpful, positive, ethically questionable, etc.)
- **Type of interaction categories** (examples included):
 - **Direct/Active AI Interactions** – e.g., ChatGPT for a recipe, Gemini for coding help, image generation software.

- **Passive/Ambient Interactions** – e.g., Spotify “Recommended for You” songs, targeted social media ads, FaceID unlocking.
- **Professional/Academic Interactions** – e.g., automated resume screening, email smart replies, predictive text in Google Docs.
- **Physical/Environmental Interactions** – e.g., smart home devices, Google Maps for traffic, automated checkout.

Part 2: The AI “Opt-Out”

- **Task:** Identify 2–3 recurring periods in your week (morning routine, work, study, exercise, etc.). For each of the periods selected choose **one hour per period** to be completely **AI-Free**. Don’t use any predictive text, GPS, smart home, social media algorithms, etc.
- **Take notes during the 1 hour free period:**
 - How did you feel?
 - What substitutions did you make?
 - Was it possible to complete tasks without AI?
 - Optionally, redo one or two tasks “the old way” (recipe book, paper map, thesaurus).
- **Part 2 is for your own reflection, it will not be included in your final submission.**

Part 3: The Ethical Reflection

- **Task:** Write a **750–1000 word reflection** after completing the log.
- Address **at least three** of the following prompts:
 1. **Data origin and privacy:** Consider how data for at least three systems was collected. Did the AI have access to personal info? Was your consent explicit or implied?
 2. **“Black box” vs. transparency:** Identify one interaction where you didn’t understand the AI’s decision. Ethical implications?
 3. **Human agency:** Did AI increase productivity or subtly influence behavior? Did you feel in control? Did it enhance creativity or replace it?

4. **“Stochastic Parrot” vs. intelligence:** Examine an Active interaction. Was the AI actually “understanding,” or predicting the next token? Did this affect your trust?
5. **Data shadow interactions:** Find one automated marketing email. What does it reveal about your “profile”? How accurate is it?
6. **Reflection on AI Opt-Out:** What did going AI-free reveal about your usage? Are you interested in unplugging, or are AI systems beneficial?

Summary of Deliverables

1. One PDF submitted to the “Module 6 Assignment Reflection Submission.” It must include:
 - a. The log from Part 1
 - b. The reflection from Part 3

This should be completed after working through Module 6: Responsible AI. Submit this through the “Module 6 Assignment Reflection Submission” Assignment link.

Please document your word count for each section within the PDF.
